

90° Probes - Option T5

Option T5 provides a right angle sensor tip design that turns 90° in the shortest space possible for most sensor models. We often customize it to suit the application. Some examples are provided here.

RC171-T5

A customer included flanged extensions on the sensor body. He used these extensions to clamp the sensor into its proper location. The probes were required to support pulsating pressure cycles of 0 - 125 psi @ 100°C.
